Fire and Burning	Page	5
Mechanical Treatment	Page	18
Exotic Plant Removal	Page	20
Exotic and Nuisance Animal Removal	Page	34
Marine Turtle Nesting	Page	62

## 2013 –2014 Resource Management Annual Report Executive Summary

### Prescribed Burning and Wildfires

- FPS burned 69,382 acres, a 22% increase from the previous fiscal year, just four acres shy of the division's minimum ecological target and 65% of the acres planned
- The number of fire-type acres in rotation (not backlogged) decreased 8.7%
- FPS conducted 404 prescribed burns, 30 more than the previous year
- 27 wildfires accounted for 1,076 acres (1.6%) of the total acres burned
- Of 92 parks with acres planned for prescribed fire, 75 conducted at least one prescribed burn
- 36 parks exceeded the minimum ecological target, two fewer than the previous year
- Districts One and Five achieved 100% of their planned goals
- 2,079 acres were mechanically treated in 37 parks for habitat improvement or fuel reduction

Although staff and equipment were well-prepared, favorable weather conditions precluded the need for FPS to deploy wildfire strike teams for the second year in a row. The favorable weather combined and heightened preparedness contributed to a near-record number of acres burned during the fourth quarter. The 36,375 acres burned between April and June 2014 exceeded the three previous quarters combined, and was the third-highest fourth-quarter achievement on record.

### Exotic Plant Removal

- FY 13-14 marked the first time that the Marjorie Harris Carr Cross Florida Greenway was included in the database report, resulting in a marked increase in both the number of gross acres "worked" and the number of infested acres treated
- The total number of infestations recorded as of FY 13-14 is 7,734, slightly down from last fiscal year, reflecting both successful treatments as well as refined mapping techniques
- In conjunction with fewer recorded infestations, the total number of acres in maintenance condition continues its upward trend, increasing from 457,831 in FY 12-13 to 535,651 for FY 13-14
- 28 parks submitted projects and were approved for funding from FWC's Upland Invasive Plant Management program

## **Exotic and Nuisance Animal Removal**

- 3,895 feral hogs were removed from 50 parks, down slightly from the near-record highs of the previous two years
- The number of feral cats removed increased by 41% last fiscal year with 11 District One parks removing 51 of these voracious predators of native birds
- When analyzed by vertebrate class, herpetofauna (amphibians and reptiles) consistently represent the greatest variety of species, while the thousands of feral hogs removed each year consistently reflects that the greatest number of individuals removed are mammals

During FY 2013-14 the division implemented new firearms training and qualifications standards for staff who use firearms for exotic animal control. Among many other new safety and security procedures, staff are now required to qualify at a local firing range before being authorized to use a firearm. The new standards will improve safety, proficiency, and accountability for staff, and also will result in more effective and appropriate euthanizing of exotic animals in state parks. Because the new standard precludes the use of personal firearms the Bureau of Natural and Cultural Resources purchased more than 60 firearms and distributed to affected parks for exotic animal removal.

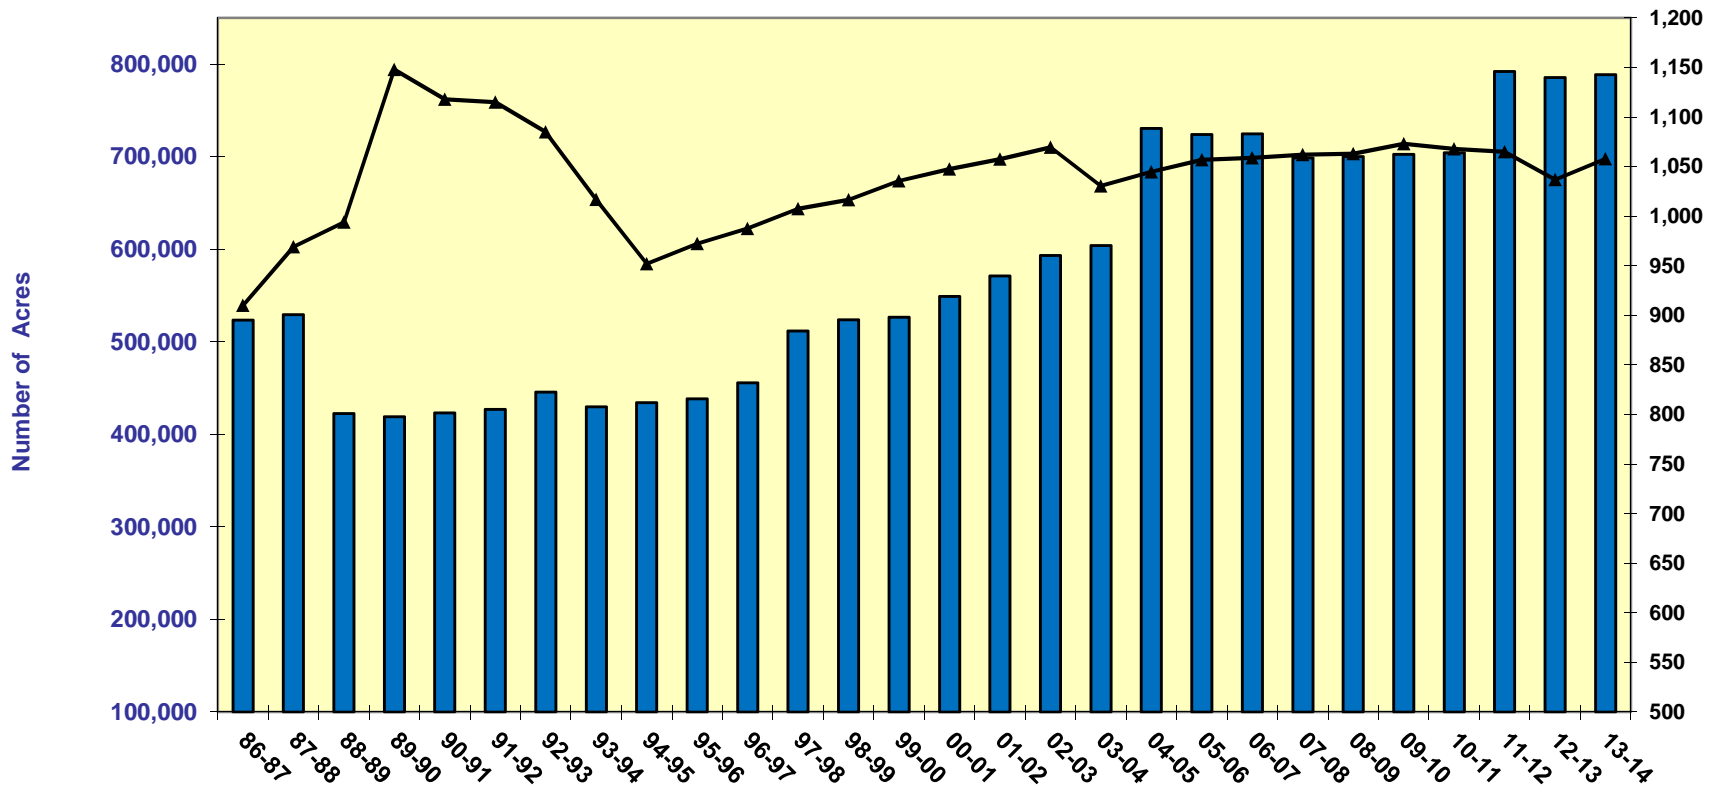

## **Marine Turtle Nesting**

- 5,269 total nests were reported, down from both 2012 and 2013 totals
- This is the third highest year on record for Leatherbacks with 127 nests, following 2011 with 131 nests and 2013 with 145 nests
- Roughly 103 miles of state park beaches were surveyed in 39 parks
- 128 nests were damaged by erosion which is a significant decrease from 178 in 2013
- Nest depredation increased from 7% in 2013 back up to 9% in 2014

John D. MacArthur Beach was very proud to host their first full scale citizen science nest excavation program. This program was a huge success and brought together park staff, regular service volunteers, and members of the community to research and collect meaningful data on sea turtle nests. They estimated 163,882 loggerhead eggs were laid on the park beaches producing 101,616 hatchlings. Applying their “best guess” of how many hatchlings make it to adulthood, staff estimate the park may have produced 100 adult loggerhead sea turtles this season.

## Comparison of Staff to Acres Managed

The chart below show the changes over time in the number of full-time staff compared to the number of acres under the jurisdiction of the Division of Recreation and Parks.

Acres = Upland and submerged.

**PLANNING AS OF JULY 1**

- Fire-Type (FT) Acres:** Includes all natural communities where fire is an ecological process and any other zones being managed with fire.
- FT Acres in Rotation:** Fire-type acres that do not exceed maximum Fire Return Interval. That is, acres that are not backlogged. Formula: Fire-Type Acres less Backlog Acres.
- FT Target Acres:** Range of fire-type acres that need to be burned to remain in rotation. Formula: Sum of Acres by zone divided by maximum / minimum fire return interval.
- FT Acres Planned:** Fire-type acres in the fiscal year plan for burning. Formula: Sum of Annual Planned Acres.

**ACCOMPLISHMENTS - ACRES BURNED (RX / WILDFIRE)**

- Total:** Acres burned during the fiscal year, showing both prescribed and wildfire.
- Quarterly:** Acreage burned during each fiscal quarter, showing both prescribed and wildfire.
- Burn Count:** Number of prescribed fires and wildfires during the fiscal year. Each entry with a FFS Authorization counts as a single prescribed burn.  
Each entry with 'Day of 1st Report' for wildfire counts as a single wildfire burn.

**EVALUATION** (Figures are performance indicators during the year and statistically valid on June 30.)

- FT Acres in Rotation:** Acreage that would be considered in rotation if no further burning for the fiscal year is done. Formula: Acres in Rotation (as of July 1) less acres that would become backlogged on June 30, plus acres burned during the fiscal year.
- % of Plan Met:** Percent of planned acres that were treated with fire. Formula: Annual Acres Treated Total divided by Acres Planned with a maximum value of 100%

## Florida Park Service Prescribed Burning History 1981-2014

**Notes About This Graph**

1981: FPS began systematically tracking fire program accomplishments

2005: Fire-type acres under management increased with the addition Office of Coastal and Aquatic Managed Areas properties

2005: Apparent increase in "Acres Planned" resulted from re-defining the plan to reflect ecological need rather than the operational plans

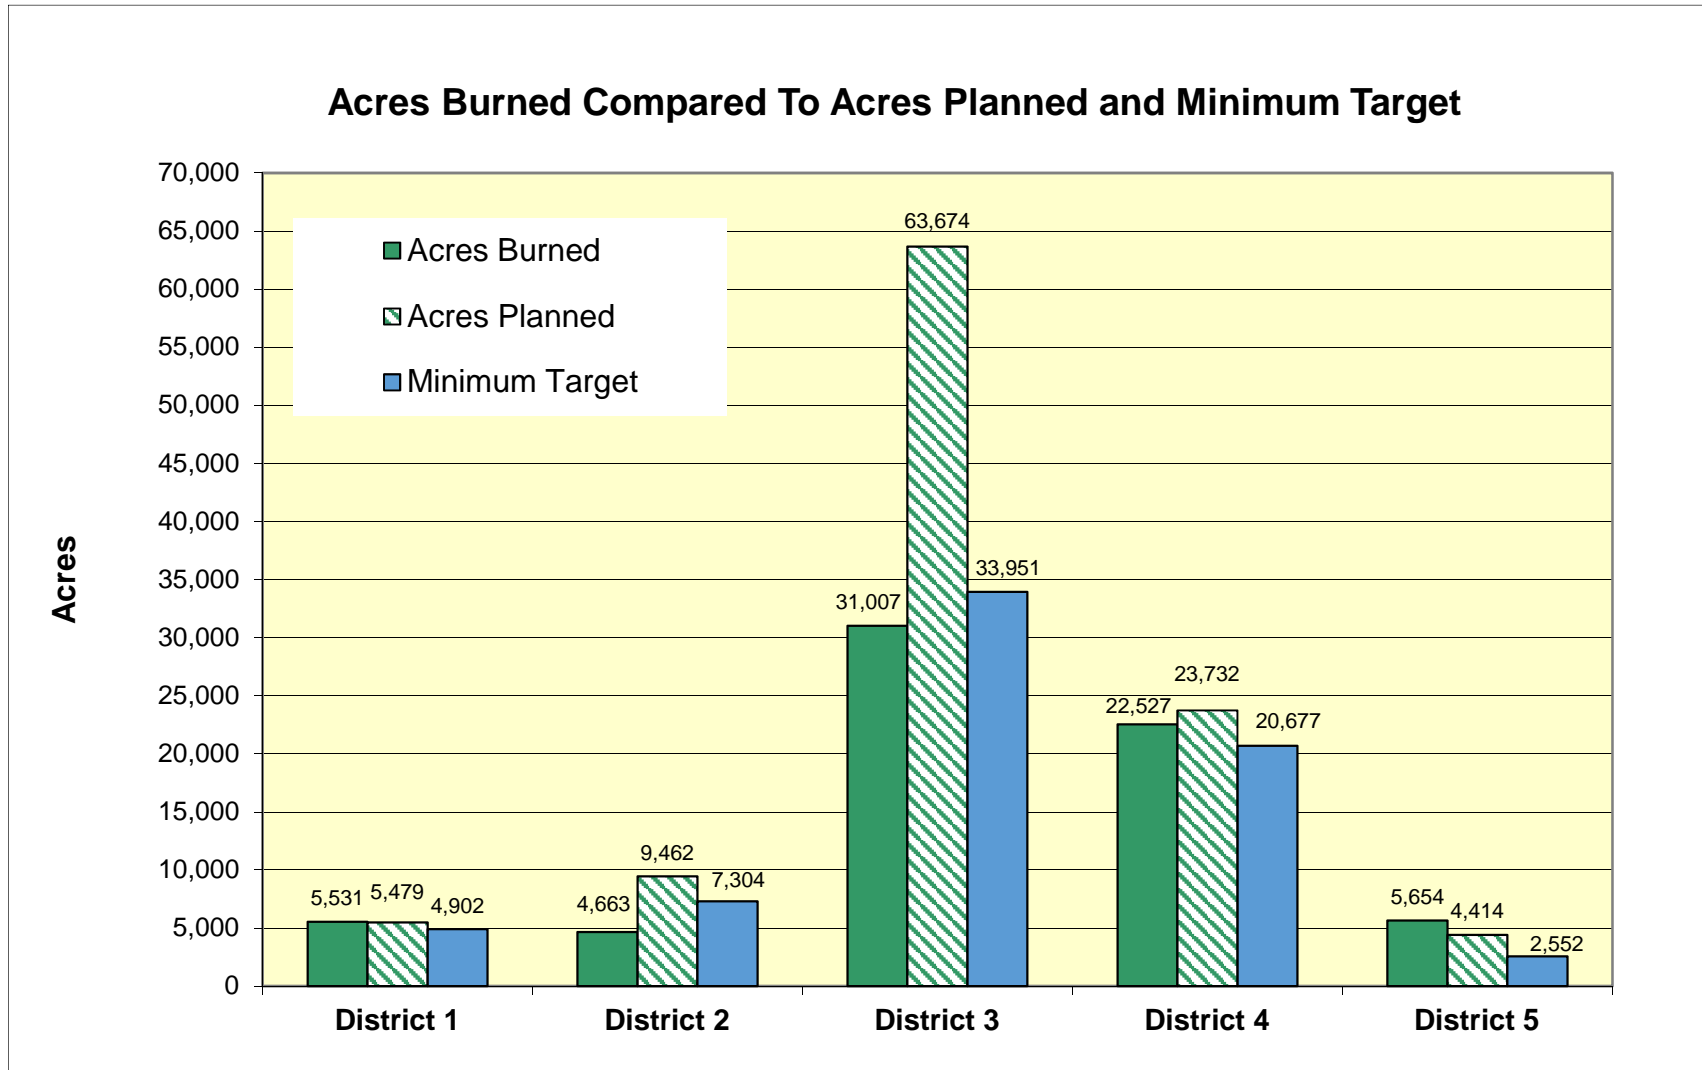

2007: Number of fire-type acres dropped significantly with the transfer of Tosohatchee State Reserve to FWC

2009: Began tracking fire management accomplishments with new, more accurate database; resumed tracking operational plans rather than ecological objective

2014: Greenways and Trails data were incorporated into the fire database adding nearly 30,000 acres of fire-type community.

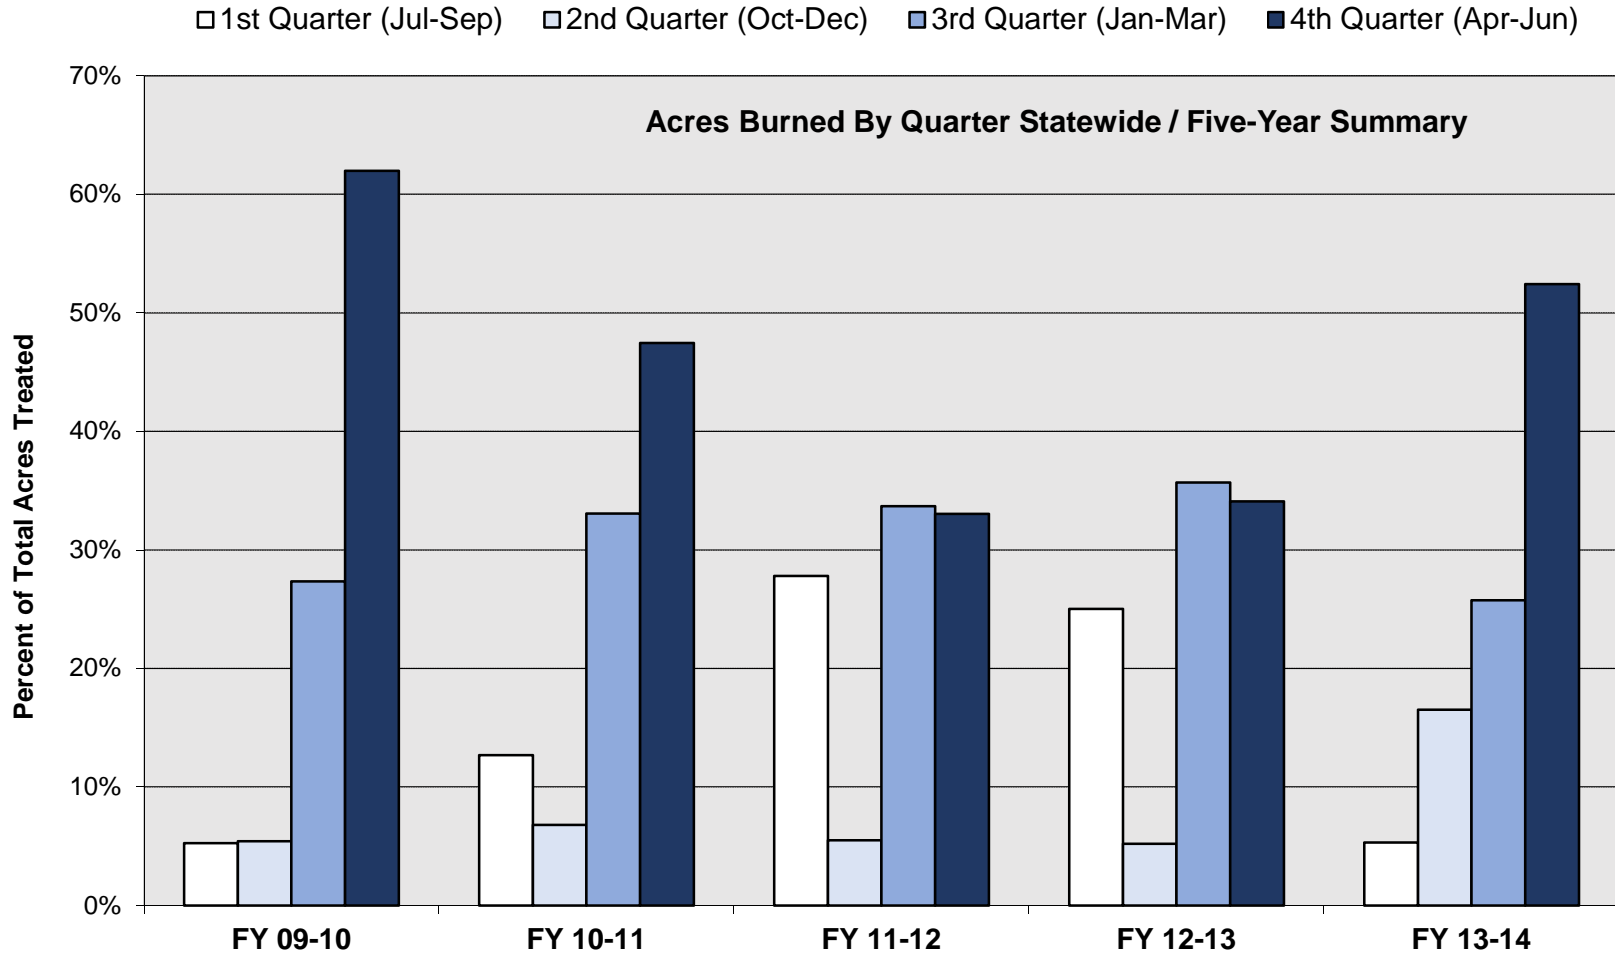

Florida Park Service  
**Annual Fire Report**  
Fiscal Year 2013-2014

The graph below shows the number of acres each district burned compared to the number planned and the minimum target. Acres burned are from both wildfire and prescribed fire. Minimum target represents the number of acres that must be burned to prevent additional backlog from accumulating and maintain appropriate inter-fire intervals for each fire-type community.

Florida Park Service  
**Annual Fire Report**  
Fiscal Year 2013-2014

The graph below compares the percentage of acres that were burned (either by prescribed fire or wildfire during each quarter of the last five fiscal years.

Florida Park Service  
**Mechanical Treatment**  
 Fiscal Year 2013-2014

FPS began tracking mechanical treatment acres in fiscal year 2003 to document efforts to improve fire-type habitats. The figures below represent the number of fire-type acres mechanically treated (mowing, roller-chopping, etc.) for fuel hazard reduction prior to conducting prescribed burns. These figures do not include fireline construction or maintenance; mechanical exotic plant removal or timber harvests.

<b>District One</b>	
Deer Lake	5.0

2002-03	4,219
<b>Total Acres Treated</b>	<b>26,312</b>

Florida Park Service  
**Mechanical Treatment Report**

Mechanical treatments such as mulching, roller-chopping, and mowing can be very effective for reducing dense understory and are often a good first step in helping to change ground cover composition prior to reestablishment of natural fire regimes. The Florida Park Service is a member of the Upland Ecosystem Restoration Project which, in collaboration with the U.S. Fish and Wildlife Service, has funded almost 1,000 acres of mechanical treatments at the St. Sebastian River Preserve State Park.

The zone depicted in the images above was rollerchopped and mowed with a brontosaurus mulching head. This treatment opened the understory and allowed the zone to carry fire, transitioning the groundcover from a near-monoculture of saw palmetto to diverse grasses and forbs. The image on the right is four years post-treatment.

## Invasive Exotic Plant Report Statewide Summary

Fiscal Year 2013-2014

	Infested Acres Treated	Gross Area Worked	Number of Parks Treating Invasives
District One	336	3,080	31
District Two	686	4,716	40
District Three	7,143	45,667	31
District Four	3,564	12,261	32
District Five	1,959	13,255	23
<b>Totals</b>	<b>13,688</b>	<b>78,979</b>	<b>157</b>

Cogon grass and Brazilian pepper retained the top two spots as the species most frequently being treated in state parks. Five of the top ten worst offenders were present in all five districts.

<b>Number of Parks Treating Each of the Top 10 Most Commonly Removed Species</b>						
Species	District 1	District 2	District 3	District 4	District 5	Total
cogon grass	13	15	19	25	4	76
Brazilian pepper	0	2	16	22	21	61
air-potato	2	12	19	15	10	58

### SUMMARY OF CURRENT CONDITIONS/PLANNING

<b>Total Park Acres:</b>	The sum of the Management Zone acreages. This acreage may differ from the Division Jurisdiction Report.
<b>Acres in Maintenance Condition:</b>	A field-based determination which should consider several factors. Generally, infestations in Maintenance Condition should: be manageable with existing staff and resources, not be expanding in size or percent cover, not contain large numbers of mature reproducing individuals, and not pose an imminent threat to imperiled plants, animals or natural communities. Additionally, any infestation that hasn't been surveyed within 24 months will fall out of maintenance condition.
<b>Gross Area (acres):</b>	The general area occupied by one or more invasive exotic species. The area is estimated by imagining a line around the general perimeter of the infestation. The Gross Area may contain significant parcels of land that are not occupied by invasive exotic plants. Also interpreted as the total area that has to be worked to ensure complete treatment of the infestation.
<b>Infested Area (acres):</b>	The approximate area of land covered by the invasive plants within a Gross Area if the invasive plants were accumulated into one area. Infested Area = Gross Area X midpoint of the Cover Class.
<b>Treatment Goals (Inf. Area):</b>	The proposed area to treat (measured as Infested Area) established by the Park Manager as an achievable annual goal with the existing park resources or probable grants for the fiscal year.

### ACCOMPLISHMENTS / INFESTED AREA TREATED

<b>Infested Area Treated:</b>	Infested Area Treated (in acres) within each fiscal quarter (acres are not cumulative).
<b>Total Treated:</b>	Sums, to date, the individual fiscal quarters for Infested Area Treated (in acres).
<b>% of Goal Met:</b>	The percentage of the Treatment Goals accomplished at the time the report was generated.
<b>Gross Area Worked:</b>	A running total of the Gross Area (in acres) that have been worked or traversed to treat the Infested Area.

<b>Statewide Totals</b>	<b>154</b>		<b>53</b>		<b>43</b>		<b>211</b>		<b>80</b>		<b>541</b>	

The data table on the previous page clearly indicates that the feral hog is the exotic species removed from Florida state parks in the greatest number of individuals. However, the graphs above indicate that, over the long term, exotic herpetofauna are actually the most abundant vertebrate *class* among all the exotic species removed. Similarly, nuisance native species are dominated by mammals, most notably raccoons.

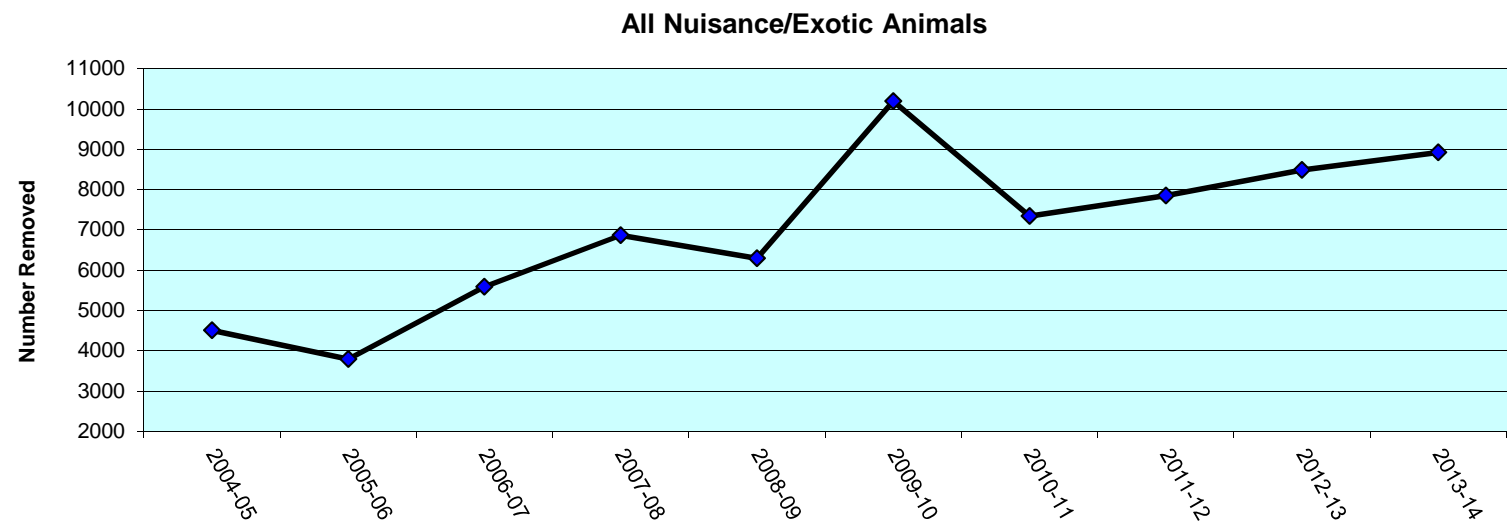

### Exotic and Nuisance Animal Removal Ten-Year Trends

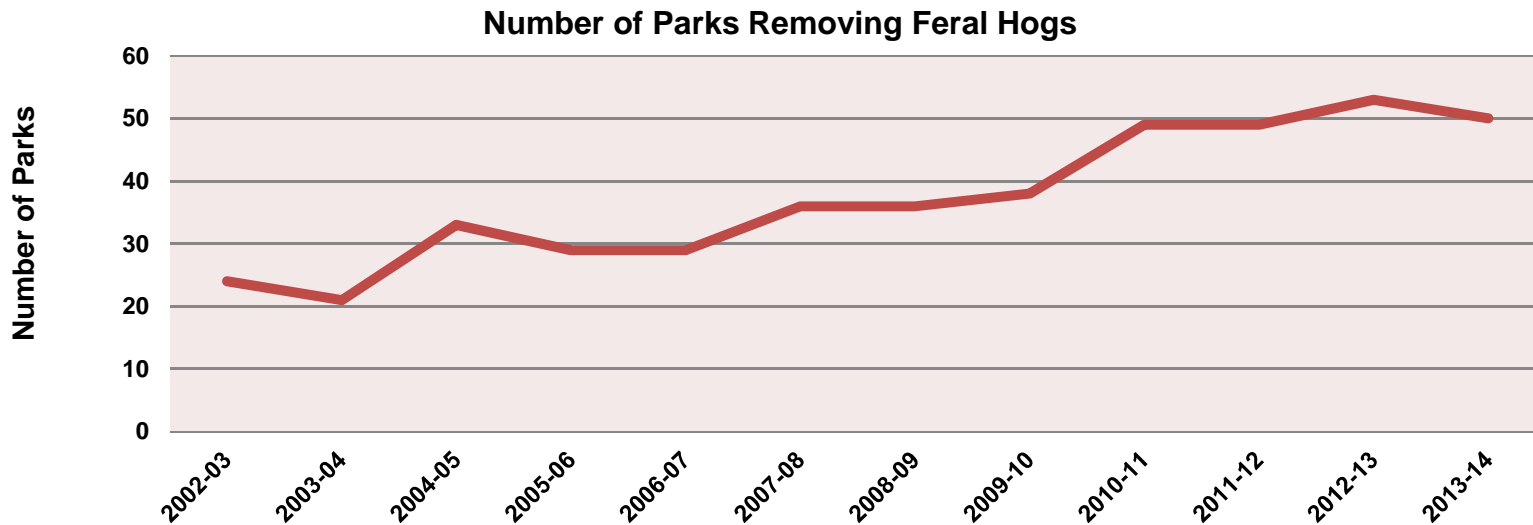

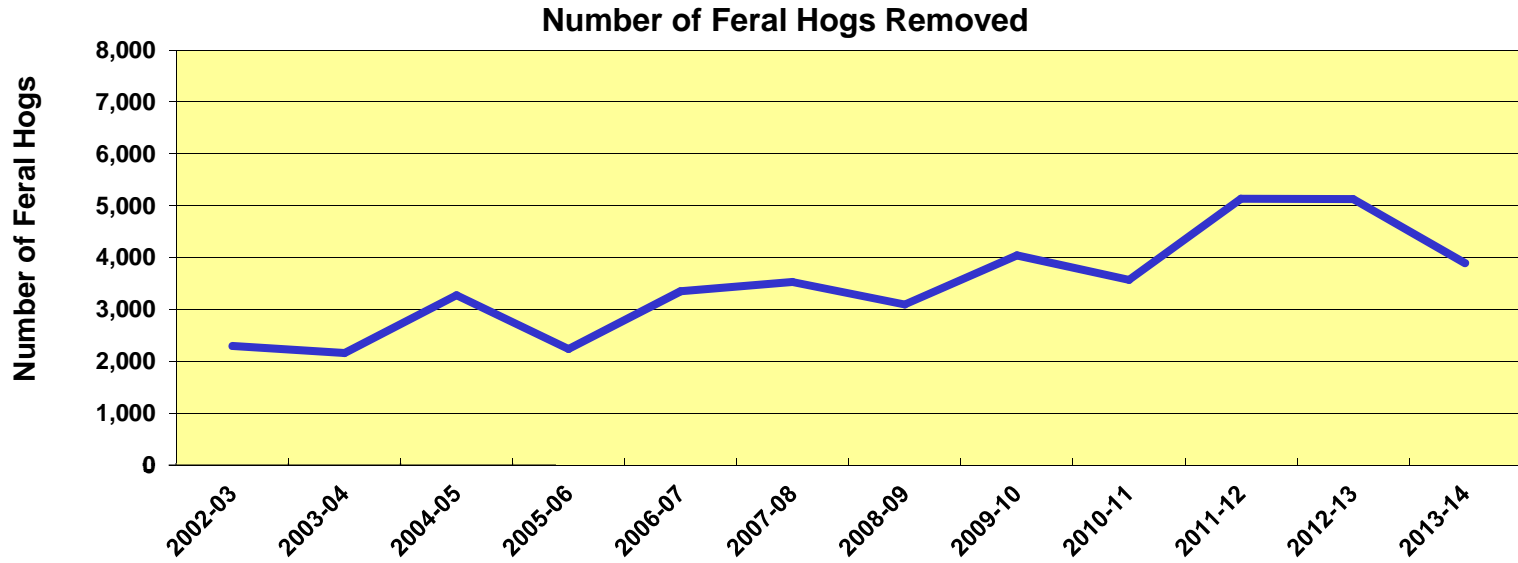

--Feral hogs continue to be the species removed from the most parks (50) and in the largest numbers (3,895). The graph at left indicates that for the past 10 years, feral hogs made up 53% of all animals removed from state parks. The 10-year average showed a 2% decrease this year due largely to an increase in the number of invertebrates which are grouped in the "Other" category.

--Feral cat removals, while increasing by 41% over the previous fiscal year, still remain at 1% of the animals removed on average for the past ten years.

--The graph below shows a substantial increase in the total number of animals removed, largely due to the inclusion of more than 1,700 exotic snails removed from The Barnacle.

Florida Park Service  
Exotic and Nuisance Animal Removal  
Fiscal Year 2013-2014

**DISTRICT THREE**

**Notes:** A nuisance alligator was taken by trappers at Colt Creek. At Blue Spring and Wekiwa Springs volunteers affiliated with various research projects assisted with exotic removal; volunteers were also utilized at the Cross-Florida Greenway and Lake Louisa. At Rock Springs Run, 11 hogs were removed as a result of the annual FWC hunt, while 70 were removed by park staff. Contractors were used at Bulow Plantation, North Peninsula, St. Sebastian and Kissimmee Prairie. Several parks reports removals due to roadkill.

**Addison Blockhouse - No Removals Reported**

**A.D. Broussard Catfish Creek**

Exotic and Nuisance Animal Removal  
Fiscal Year 2013-2014

**DISTRICT FOUR**

**Notes:** Hog removal contracts were utilized at Alafia River and Highlands Hammock. Gasparilla Island received assistance from a contractor employed by the county. FWC and private trappers removed alligators at Oscar Scherer, Alafia and Myakka River. The grazing contractor at Alafia River also provided hog removal assistance. FWC was called to remove a nuisance black bear from Collier-Seminole and Animal Control removed a feral cat at Hillsborough River.

Exotic and Nuisance Animal Removal  
Fiscal Year 2013-2014

**DISTRICT FIVE**

**Notes:** In addition to the staff-based effort within John Pennekamp, REEF Lionfish derby removed 707 lionfish; however, the exact location of all removals is unverified and possibly not all within park boundary. There are no hog removal contracts in District Five; any removals designated "Other" were via volunteer, with the exception of roadkill at Hugh Taylor Birch.
