

Last Modified November 15, 2024

Average Testing Performance Data for Components of Performance-Based Treatment Systems (PBTS)

- from innovative system testing in Florida (Table 1) or
- from test centers for evaluation of use in nutrient and fecal coliform-reducing PBTS (Table 2) or
- from test centers for NSF-certification as aerobic treatment units (ATUs) (Table 3)
- Innovative drainfield/disposal systems (Table 4)

Construction permits for PBTS must comply with Part IV of Rule 62-6, Florida Administrative Code (F.A.C.) (for details, see [Memo HSES-10-001](#)). For all PBTS, the engineer will establish performance levels, and design the system as a whole to meet them. To find treatment receptacles approved for use for a particular PBTS, refer to the septic tank design approval listings under [Septic Tank Designs](#).

Table 1 summarizes **results of innovative systems testing under non-test-center** conditions in Florida. The components listed in table 1 have undergone innovative system testing and been reviewed by the Bureau as indicated in the column “innovative status” for use as a component of an engineer-designed PBTS.

Table 2 summarizes test center testing results either associated with an NSF or ETV protocol or during the Big Pine Key study in Florida. These data have been used to evaluate treatment components that might be used as a component of **a nutrient-reducing or fecal coliform reducing PBTS** designed by engineers. These are systems that are designed to reduce nitrogen and/or phosphorus to specified levels. The components listed in table 2 below have previously been reviewed by the Bureau as indicated in the column “innovative status”. Equipment series where “yes” is indicated in the “Innovative Status” column, are currently in innovative status, indicating that such approval has occurred in a limited fashion, providing for a limited number of permits and requiring additional testing. **Note that construction permits for systems currently in innovative status require forms DEP 3144 and DEP 3145 and must be reviewed by the Onsite Sewage Program office for compliance with the innovative system permit. in addition to the regular county health department review.** “Passed” indicates that components are not in innovative status (completed innovative testing in Florida); “n/a” indicates components are not in innovative status (use of previously approved ATUs in nutrient reducing systems accepted based on third party data); “Rule 62-6.025(7)(a), F.A.C.” indicates components are approved without innovative system testing per rule 62-6.025(7)(a)(1) to (3) F.A.C.

Table 3 summarizes test center testing results where the objective was usually to achieve certification by NSF under standard NSF-40 (**waste strength reduction**). The components listed in table 3 below are treatment systems approved in Florida as ATUs under rule 62-6.012, Florida Administrative Code, except for the last few as noted. Currently, the Department is accepting such data as a form of documentation of the “application of sound engineering principles” by engineers designing PBTS with the only goal of **reducing waste strength** (CBOD₅, TSS) in order to qualify **for drainfield size reductions** under 62-6.028(5), F.A.C.

Table 4 lists additional innovative systems that are evaluated as drainfield/disposal systems.

Disclaimer: This list does not represent or imply an endorsement of any particular company, person, product, configuration or technology. The list reflects the compiler’s information as of November 15, 2024. The field of advanced treatment for onsite systems is changing continuously.

TN= Total Nitrogen

¹Construction permits require filing of DEP 3144 and DEP 3145 and must be reviewed by the Onsite Sewage Program office for compliance with the innovative system permit.

²No data available

³Yes = components are currently in innovative status (approval has occurred in a limited fashion, providing for a limited number of permits and additional testing; construction permits must be reviewed by the Onsite Sewage Program office for compliance with the innovative system permit and include forms DEP 3143 and DEP 3144).

⁴Saturated and up to 5.5 gpd/sqft. is acceptable; bulk density of FilterLite media is 550 kg/m³, and absorption of LECA is 3 g/kg which represents phosphorus adsorption capacity per unit media mass (e.g., three gram of TP per kg of media used).

⁵The testing is performed on the smallest unit of an equipment series. Engineers may, as the certifier, extrapolate the performance to the larger certified units of the model series as long as there are Florida-approved tanks for the larger certified units.

Table 1. Results of Innovative System Testing in Florida

Component/ Configuration	Type of testing	CBOD5 (mg/L) (In/Out)	TSS (mg/L) (In/Out)	TN (mg/L) (In/Out)	TN (%)	TP (mg/L) (In/Out)	Vendor	Vendor Contact Phone	Vendor web-site	Innovative Status
EcoPure 300	Innovative in Florida (n=25/9 of 1 system)	327/7.7	421/6.2	58/31		11/5.1	Eco-Pure Waste-water Systems	888-999-0936	EcoPure website	Passed

Puraflo P150N	Puraflo P150N*3B	240	2	260	2	Anua
PuraSys	PekaSys CRB1 (PuraSys PS1-4)	180	11	120	20	Anua
Singulair 960	500 w/ Biokinetics	184	6	238	10	Norweco, Inc.
Singulair TNT	500	240	4	260	9	Norweco, Inc.
Singulair R3	500	233	5	176	4.6	Norweco, Inc.

3b) Treatment systems that are not ATUs per 62-6.012, Florida Administrative Code (generally, innovative systems)

Equipment Series	Model Tested	In BOD5 (mg/L)	Out CBOD5 (mg/L)	In TSS (mg/L)	Out TSS (mg/L)	Manufacturer
Advantex	AX20N Mode 3	139	10	173	18	Orenco Systems
Nitrex	Nitrex (after pretreatment) (note: for systems designed to meet 10/10 standard, innovative permit requires polishing filter)	6	26	5	5	Lombardo Associates, Inc.
Septitech	Model 400	250 (BOD5)	5.4	150	3	Septitech (BioMicrobics)

Note: Influent and effluent concentrations are averages unless otherwise noted.

Table 4. Innovative Systems that are evaluated as drainfield/disposal systems (construction permits require filing of DEP 3144 and DEP 3145 and must be reviewed by the Onsite Sewage Program office for compliance with the innovative system permit).

Manufacturer	Equipment Series
Eljen Corporation	Geotextile Sand Filter (GSF)
Geomatrix	GeoMat Leaching Systems
NoMound Onsite Systems	NoMound
